

GeoStats Data Columns Report

Every working data point in the Dubai community map and table, with its source, period, coverage and practical use cases. Generated 2026-09-08 from the local working copy.

How the columns are used

Each data point appears in three places. On the **map**, a community-level data point colours all 226 communities and prints the value on each label; grey means no data for that community. Dubai-wide data points open a **card** with a trend line or a single value. In the **Table View**, any community-level data point can be placed in one of three columns, sorted, ranked and downloaded as CSV, so users can compare communities side by side, for example Livability Score against Mortgage Payment and Population.

Where	What the user sees	Typical question answered
Map layer	Choropleth colour scale, value label per community, legend with source, period and limitations	Where in Dubai is this high or low?
Trend card	Line over years with latest value and change since the first year	Which way is the Dubai market moving?
Single-value card	One Dubai-wide figure with its rule or period	What is the current reference number?
Table View	Ranked rows of communities across three chosen columns, CSV export	Which communities score best on these criteria together?

Reading the sources. DLD = Dubai Land Department transactions and Ejari rents (via bundled exports and DLD Exchange). DSC = Dubai Statistics Centre. KHDA = Knowledge and Human Development Authority school data. OSM = OpenStreetMap. World Bank series are national proxies and are labelled as such. Composite scores are percentile ranks across Dubai communities, so they are relative, not absolute.

Distribution & Quality Analysis

School map + charts

Analysis of the distribution and quality of schools in the area. Telling How many schools fall under each rating: Outstanding, Very Good, Good, Acceptable, Unsatisfactory.

Source	UAE Ministry of Education
Period	2024/25 (ratings to 2022/23)
Coverage	All KHDA schools

Use cases

- Parents: see where schools cluster and how they rate.

Rating distribution

School map + charts

Which area have high rated schools?

Source	UAE Ministry of Education
Period	2024/25 (ratings to 2022/23)
Coverage	All KHDA schools

Use cases

- Parents and regulators: spread of DSIB ratings across schools.

Fee Distribution

School map + charts

The average fee for schools in the area. Is there a difference in fees between public and private schools?

Source	UAE Ministry of Education
Period	2024/25 (ratings to 2022/23)
Coverage	All KHDA schools

Use cases

- Parents: fee bands across Dubai schools.

Enrollment Growth

School map + charts

The growth of enrollment in the area. Telling How many schools for KG to primary students

Source	UAE Ministry of Education
Period	2024/25 (ratings to 2022/23)
Coverage	All KHDA schools

Use cases

- School operators: demand trends by year.

Population

Map layer

The area's population according to the most recent year of official UAE statistics and surveys.

Source	Dubai Statistics Center (2011-2022, ArcGIS)
Period	2011–2022
Coverage	226 of 226 communities

Use cases

- Everyone: the base layer for per-capita comparisons and catchment sizing.
- Retail, healthcare and education planners: size demand.

Home Value

Map layer

The area's typical home value based on market activity in the UAE. This is a smoothed, seasonally adjusted figure representing overall residential property trends.

Source	Dubai Land Department (unofficial mirror)
Period	2008 to 2022 (2005-07 too sparse; 2023 partial in source)
Coverage	57 of 226 communities
Range	300,000 to 20,130,000

Use cases

- Buyers: benchmark an asking price against what actually transacted in the community.
- Investors: rank communities by entry price before screening yields.
- Lenders and valuers: sanity-check appraisals against the DLD median.

Home Value Growth (YoY)

Trend card

The year-over-year percentage change in typical home values within the UAE real estate market.

Source	Dubai area price history (DLD-derived)
Period	2008 to 2022 (2005-07 too sparse; 2023 partial in source)
Coverage	Dubai-wide
Range	28.02% to 23%

Use cases

- Investors: read the Dubai-wide price cycle year by year.
- Analysts: compare a community's momentum with the emirate average.

Home Value Growth (5-Year)

Trend card

The 5-year growth rate in home values for an area. Looking at this data point gives a longer-term view of appreciation in the market. The higher the long-term appreciation, the better for homeowners and investors. However - make sure to use this data point in conjunction with Overvalued % to understand if 5-year appreciation is likely to go up or down into the future

Source	Dubai area price history (DLD-derived)
Period	2008 to 2022 (2005-07 too sparse; 2023 partial in source)
Coverage	Dubai-wide
Range	59.46% to 33.13%

Use cases

- Investors: judge medium-term appreciation before committing capital.
- Homeowners: understand how values moved over a typical holding period.

Overvalued %

Trend card

Dubai-wide estimate of how far the yearly median price per m² sits above or below its long-run trend, a log-linear trend fitted to 2010-2025 (about 4.4% compound growth a year). Positive = above trend, negative = below. Community income data is not available, so unlike the original income-based definition this compares prices to their own history. Not a forecast.

Source	DLD-derived area price history (bundled), 2010-2025
Period	2010-01 to 2025-08
Coverage	Dubai-wide
Range	0.8% to 22.4%

Use cases

- Investors: see whether Dubai prices sit above or below their long-run trend before timing a purchase.
- Analysts: frame the current cycle against 2014 and 2020 extremes.

Cap Rate

Map layer

The unlevered annual return a real estate investor can expect if they were to buy a property at prevailing Home Values and rent it out at prevailing Rental Rates. Higher cap rates mean more cash flow returns to investors. Note that Cap Rate figures are estimates and could be subject to error, especially at the Community level.

Source	DLD Exchange (Ejari + DLD, 2026 YTD)
Period	2026-01-01 to 2026-08-28 (the API holds current-year data only)
Coverage	49 of 226 communities
Range	1.33 to 9.09

Use cases

- Buy-to-let investors: compare gross yields across communities.
- Portfolio managers: spot yield compression as prices outrun rents.

Population Growth

[Map layer](#)

Annualised population growth per community between 2011 and 2022, from Dubai Statistics Center community population estimates.

Source	Dubai Statistics Center
Period	n/a
Coverage	188 of 226 communities
Range	-41.55 to 104.71

Use cases

- Retail and F&B operators: find fast-growing catchments.
- Developers and schools: forecast demand for units and seats.
- Government: prioritise infrastructure where residents are arriving.

Home Value

Map layer

The area's typical home value based on market activity in the UAE. This is a smoothed, seasonally adjusted figure representing overall residential property trends.

Source	Dubai Land Department (unofficial mirror)
Period	2008 to 2022 (2005-07 too sparse; 2023 partial in source)
Coverage	57 of 226 communities
Range	300,000 to 20,130,000

Use cases

- Buyers: benchmark an asking price against what actually transacted in the community.
- Investors: rank communities by entry price before screening yields.
- Lenders and valuers: sanity-check appraisals against the DLD median.

Home Value Growth (YoY)

Trend card

The year-over-year percentage change in typical home values within the UAE real estate market.

Source	Dubai area price history (DLD-derived)
Period	2008 to 2022 (2005-07 too sparse; 2023 partial in source)
Coverage	Dubai-wide
Range	28.02% to 23%

Use cases

- Investors: read the Dubai-wide price cycle year by year.
- Analysts: compare a community's momentum with the emirate average.

Home Value Growth (5-Year)

Trend card

The 5-year growth rate in home values for an area. Looking at this data point gives a longer-term view of appreciation in the market. The higher the long-term appreciation, the better for homeowners and investors. However - make sure to use this data point in conjunction with Overvalued % to understand if 5-year appreciation is likely to go up or down into the future

Source	Dubai area price history (DLD-derived)
Period	2008 to 2022 (2005-07 too sparse; 2023 partial in source)
Coverage	Dubai-wide
Range	59.46% to 33.13%

Use cases

- Investors: judge medium-term appreciation before committing capital.
- Homeowners: understand how values moved over a typical holding period.

Overvalued %

[Trend card](#)

Dubai-wide estimate of how far the yearly median price per m² sits above or below its long-run trend, a log-linear trend fitted to 2010-2025 (about 4.4% compound growth a year). Positive = above trend, negative = below. Community income data is not available, so unlike the original income-based definition this compares prices to their own history. Not a forecast.

Source	DLD-derived area price history (bundled), 2010-2025
Period	2010-01 to 2025-08
Coverage	Dubai-wide
Range	0.8% to 22.4%

Use cases

- Investors: see whether Dubai prices sit above or below their long-run trend before timing a purchase.
- Analysts: frame the current cycle against 2014 and 2020 extremes.

Mortgage Payment

[Map layer](#)

Estimated monthly mortgage payment (principal and interest) for the community's median asking price, at 80% loan-to-value over 25 years using Emirates NBD's published indicative rate of 3.99% p.a. (effective July 2026). Excludes service charges, DLD transfer fee and insurance. 2026 snapshot.

Source	Derived: PF asking prices x Emirates NBD rate (2026)
Period	2026 snapshot (prices Feb 2026, rate Jul 2026, rents Jan-Aug 2026)
Coverage	34 of 226 communities
Range	2,658 to 23,179

Use cases

- Buyers: know the monthly commitment for a typical home in each community.
- Mortgage advisers: pre-qualify clients by area.

Salary to Afford a House

[Map layer](#)

The gross household income needed to afford the community's median asking price, assuming 30% of income goes to the mortgage payment (80% LTV, 25 years, 3.99% p.a. per Emirates NBD, July 2026). 2026 snapshot.

Source	Derived: PF asking prices x Emirates NBD rate (2026)
Period	2026 snapshot (prices Feb 2026, rate Jul 2026, rents Jan-Aug 2026)
Coverage	34 of 226 communities
Range	106,301 to 927,178

Use cases

- Relocating families: match communities to household income.
- HR teams: set housing allowances by area.

Property Tax Rate

Single-value card

Dubai levies no annual property tax on home value. The recurring levy is the Dubai Municipality housing fee: 5% of annual rent, billed monthly through DEWA (confirmed on the Dubai Land Department FAQ). A one-off 4% DLD transfer fee (2% seller + 2% buyer) applies at purchase. Shown as a Dubai-wide value.

Source	Dubai Land Department FAQ and fee schedule
Period	Current rule (verified 2026-09-07)
Coverage	Dubai-wide
Range	5%

Use cases

- Foreign investors: confirm Dubai has no annual property tax and what recurring fee applies.
- Buyers: budget the 4% one-off transfer fee.

Buy v Rent Differential

Map layer

Monthly mortgage payment minus median Ejari flat rent for the community. Positive = buying costs more per month than renting; negative = renting costs more. Principal and interest only; ignores the down payment's opportunity cost and fees. 2026 snapshot.

Source	Derived: PF asking prices x Emirates NBD rate (2026)
Period	2026 snapshot (prices Feb 2026, rate Jul 2026, rents Jan-Aug 2026)
Coverage	27 of 226 communities
Range	-1,509 to 6,096

Use cases

- Tenants deciding whether to buy: see where a mortgage is cheaper than rent.
- Investors: spot communities where renting is far cheaper, a sign prices may be stretched.

% Change from June 2022

Trend card

The % change in Dubai-wide median price per m2 since June 2022, the widely-referenced pre-correction peak reference month.

Source	Dubai area price history (DLD-derived)
Period	2022-06 to 2025-08
Coverage	Dubai-wide
Range	0% to 80.71%

Use cases

- Investors: measure gains since the post-pandemic upturn.
- Owners: track equity built since mid-2022.

% Change from 2016 Peak

[Trend card](#)

Dubai-wide % change in the yearly median price per m² relative to the pre-correction peak year (2016). Negative values show how far the market sat below its peak during the 2017-2021 correction; positive values show how far it has since surpassed it. 2010-2025.

Source	DLD-derived area price history (bundled)
Period	2010-01 to 2025-08
Coverage	Dubai-wide
Range	-33.2% to 53.8%

Use cases

- Risk-aware buyers: see how far the market fell in the last correction and how far it has since climbed.
- Lenders: stress-test loan-to-value against historical drawdowns.

Home value growth (MoM)

[Trend card](#)

The seasonally adjusted month-over-month growth rate in the area's typical home value, reflecting short-term changes in the UAE housing market.

Source	Dubai Land Department (unofficial mirror)
Period	2025-01 to 2025-08 (Sep excluded: partial month)
Coverage	Dubai-wide
Range	-5.32 to 0.35

Use cases

- Traders and brokers: catch short-term turns in the Dubai market.

Community Safety Score

Map layer

Registered road traffic incidents per 1,000 residents, from Dubai Police incident records (2023-2025).
NOTE: higher values mean MORE incidents, so lower is safer. The map scale is inverted accordingly.

Source	Dubai Traffic Incident Reports (ArcGIS)
Period	2023-03-09 to 2025-02-06
Coverage	129 of 226 communities
Range	5.09 to 216.66 (higher = worse)

Use cases

- Families and insurers: compare road-incident exposure by community.
- Municipal planners: target traffic-calming measures.

Public School Quality Rating

Map layer

Average rating of public schools in the area based on academic performance, teacher quality, and student outcomes. Helps families make informed education decisions.

Source	KHDA DSIB ratings
Period	2022/23 academic year (Latest DSIB Rating; 87% match the 2022/23 column, remainder are each school's most recent prior inspection)
Coverage	72 of 226 communities
Range	2 to 5

Use cases

- Parents: shortlist communities with well-rated schools.
- Developers: school quality as a selling point.

Average Schooling Cost

Map layer

Average annual tuition (AED) across the private schools located in the community, taken from each school's published KHDA fee schedule for the 2024/25 academic year. Each school contributes the simple average of its fees across the grades it offers; communities with fewer than 3 schools are not shown. Private schools only.

Source	KHDA private-school fee schedules, 2024/25
Period	2024/25 academic year
Coverage	28 of 226 communities
Range	10,099 to 70,689

Use cases

- Families: budget school fees by community before choosing where to live.
- HR teams: calibrate education allowances.

Healthcare Accessibility Score

[Map layer](#)

Measures access to quality healthcare including hospitals, clinics, and emergency services within reasonable distance. Critical for community health planning.

Source	OpenStreetMap (Overpass)
Period	current OSM snapshot (no historical series)
Coverage	226 of 226 communities
Range	0 to 27.36

Use cases

- Older residents and families: proximity to clinics and hospitals.
- Health operators: find under-served areas.

Public Transportation Coverage

[Map layer](#)

Percentage of area covered by public transportation including metro, buses, and other public transit options. Reduces traffic congestion and environmental impact.

Source	OpenStreetMap (Overpass)
Period	current OSM snapshot (no historical series)
Coverage	226 of 226 communities
Range	0 to 59.43

Use cases

- Commuters: choose car-light communities.
- RTA and planners: identify coverage gaps.

Walkability Score

[Map layer](#)

A score measuring how walkable the area is based on factors such as proximity to amenities, public transit, and pedestrian infrastructure.

Source	OpenStreetMap (Overpass)
Period	current OSM snapshot (no historical series)
Coverage	226 of 226 communities
Range	0 to 615.75

Use cases

- Residents without cars: find communities with dense footpath networks.
- Urban planners: target pedestrian investment.

Green Space per Capita

Map layer

The NUMBER of parks, gardens and other green spaces per 10,000 residents, mapped from OpenStreetMap. This is a count of green spaces, not their surface area.

Source	OpenStreetMap (Overpass)
Period	current OSM snapshot (no historical series)
Coverage	122 of 226 communities
Range	0 to 309.35

Use cases

- Families and wellbeing-focused residents: find leafy communities.
- Municipality: prioritise park investment.

Digital Infrastructure Score

Trend card (national proxy)

Share of the UAE population using the internet (World Bank), used as a proxy for digital infrastructure. National figure, close to saturation.

Source	World Bank (internet users proxy)
Period	2000–2024
Coverage	UAE-wide
Range	23.63 to 100

Use cases

- Remote workers and tech firms: connectivity context.
- Investors: digital readiness as a national fundamental.

Environmental Quality Index

Trend card (national proxy)

Air quality, water quality, and environmental sustainability metrics. Protects public health and ensures sustainable development.

Source	World Bank (CO2 per capita proxy)
Period	2000–2024
Coverage	UAE-wide
Range	25.32 to 18.26

Use cases

- ESG investors and policy: track emissions per capita over time (lower is better).

Job Market Diversity

[Map layer](#)

Variety of employment opportunities across different sectors and skill levels. Promotes economic stability and career growth for residents.

Source	OpenStreetMap (Overpass)
Period	current OSM snapshot (no historical series)
Coverage	96 of 226 communities
Range	0.13 to 3.45

Use cases

- Job seekers: communities with a broad mix of employers.
- Economic planners: reduce single-sector dependence.

Disability Accessibility Score

[Map layer](#)

The share of places carrying an explicit OpenStreetMap wheelchair tag that are marked accessible.

NOTE: only about 6% of Dubai venues are tagged at all, so this reflects the accessible share of ASSESSED places, not accessibility across all venues.

Source	OpenStreetMap (wheelchair tag)
Period	current OSM snapshot (no historical series)
Coverage	38 of 226 communities
Range	0 to 90.9

Use cases

- Residents with mobility needs: find communities where mapped venues are step-free.
- Operators: benchmark accessibility compliance.

Cultural Diversity Index

[Map layer](#)

Proxy index (0-100): how evenly the private schools in a community are spread across curriculum families (UK, American, Indian, IB, MoE, French, Iranian, Pakistani and others), from the KHDA school list. A wider curriculum mix indicates a more mixed expatriate population. Communities with fewer than 3 schools are not scored. Not an official measure of residents by nationality.

Source	KHDA school curricula, 2024/25 (proxy)
Period	2024/25 academic year (school list); proxy has no time series
Coverage	33 of 226 communities
Range	14.8 to 54.5

Use cases

- Relocating families: gauge how internationally mixed a community is.
- Schools and retailers: tailor offerings to the resident mix.

Emergency Services Proximity

Map layer

Average straight-line distance (km) from the community centre to the nearest fire station, nearest police station and nearest hospital, from OpenStreetMap. A proximity proxy for emergency response, not a measured response time: no road routing or dispatch data. Remote communities may look farther than reality where facilities are not mapped. Current snapshot.

Source	OpenStreetMap (Overpass API), Sep 2026
Period	current OSM snapshot (no historical series)
Coverage	226 of 226 communities
Range	0.55 to 68.7 (higher = worse)

Use cases

- Families and insurers: proximity to fire, police and hospital cover.
- Civil defence planners: spot communities far from the nearest station.

Home Sales

Trend card

Number of home sales in the most recent month.

Source	Dubai Land Department (unofficial mirror)
Period	2008 to 2022 (2005-07 too sparse; 2023 partial in source)
Coverage	Dubai-wide
Range	12,255 to 63,340

Use cases

- Brokers and developers: measure transaction volume and liquidity trends.
- Analysts: detect slowdowns before prices react.

Home Sales Growth (YoY)

Trend card

Year-over-year growth in residential unit sales count, derived from DLD transaction records.

Source	DLD 1995-2023 transactions (mirror)
Period	2008 to 2022 (2005-07 too sparse; 2023 partial in source)
Coverage	Dubai-wide
Range	437.23% to 75.27%

Use cases

- Market watchers: read the direction of buyer activity year over year.

Median Listing Price

Map layer

The median ASKING price of residential properties listed for sale in the community (Property Finder, February 2026 snapshot). This is a listing-side figure and sits above completed-sale prices; validated at $r=0.93$ against DLD transacted prices. Based on a listing sample, so only communities with 10+ listings are shown.

Source	Property Finder listings (Feb 2026)
Period	snapshot scraped 2026-02-13
Coverage	34 of 226 communities
Range	630,000 to 5,495,000

Use cases

- Sellers: set a competitive asking price for the community.
- Buyers: compare asking prices with transacted values to gauge negotiating room.

Median Price per m²

[Map layer](#)

The median transacted price per square metre for residential units, from Dubai Land Department sale records.

Source	Dubai Land Department (unofficial mirror)
Period	2010-01 to 2025-08
Coverage	129 of 226 communities
Range	1,552 to 43,635

Use cases

- Buyers: compare value on a like-for-like basis across unit sizes.
- Valuers: the standard Dubai pricing unit.

Off-Plan Share

[Trend card](#)

The share of residential unit sales that are off-plan (sold before completion) rather than ready properties.

Source	Dubai Land Department (unofficial mirror)
Period	2025-01 to 2025-08 (Sep excluded: partial month)
Coverage	Dubai-wide
Range	63.8% to 77.4%

Use cases

- Investors: how much of the market is off-plan, a risk and supply signal.

Mortgage Share of Transactions

[Trend card](#)

The share of all registered Dubai Land Department transactions that are mortgage registrations, indicating financed activity.

Source	Dubai Land Department (unofficial mirror)
Period	2025-01 to 2025-08 (Sep excluded: partial month)
Coverage	Dubai-wide
Range	21.5% to 19.8%

Use cases

- Lenders and analysts: share of purchases financed by mortgage versus cash.

Population

Map layer

The area's population according to the most recent year of official UAE statistics and surveys.

Source	Dubai Statistics Center (2011-2022, ArcGIS)
Period	2011–2022
Coverage	226 of 226 communities

Use cases

- Everyone: the base layer for per-capita comparisons and catchment sizing.
- Retail, healthcare and education planners: size demand.

GDP per Capita (income proxy)

Trend card (national proxy)

UAE GDP per capita in current US dollars (World Bank), used as a PROXY for household income. GDP per capita is total output per person and is substantially higher than actual median household income.

Source	World Bank (GDP per capita proxy)
Period	2000–2024
Coverage	UAE-wide
Range	29,866 to 50,274

Use cases

- Affordability analysis: the income benchmark behind rent and mortgage ratios.
- Retail: gauge spending power at the national level.

Population Growth

Map layer

Annualised population growth per community between 2011 and 2022, from Dubai Statistics Center community population estimates.

Source	Dubai Statistics Center
Period	n/a
Coverage	188 of 226 communities
Range	-41.55 to 104.71

Use cases

- Retail and F&B operators: find fast-growing catchments.
- Developers and schools: forecast demand for units and seats.
- Government: prioritise infrastructure where residents are arriving.

Income Growth

Trend card (national proxy)

Year-over-year percentage change in UAE GDP per capita (World Bank), used as a proxy for income growth. Higher income growth is generally a positive for Home Values.

Source	World Bank (GDP per capita proxy)
Period	2001–2024
Coverage	UAE-wide
Range	-7.1 to 0.85

Use cases

- Employers and analysts: track real income momentum year by year.

Employment Growth

Trend card (national proxy)

Year-over-year % change in the UAE employment-to-population ratio (World Bank, modeled ILO estimate), used as a proxy for employment growth since no direct Dubai job-count series exists. This is a national figure, not Dubai-specific.

Source	World Bank (employment ratio proxy)
Period	2002–2025
Coverage	UAE-wide
Range	0.23 to 0.13

Use cases

- Developers: link job creation to housing demand.
- Analysts: leading indicator for rental absorption.

Tertiary Enrolment Rate

Trend card (national proxy)

UAE gross tertiary school enrolment as a share of the relevant age group (World Bank). Measures people currently ENROLLED in tertiary education, not degree attainment, and can exceed 100%.

Source	World Bank (tertiary enrollment proxy)
Period	2018–2024
Coverage	UAE-wide
Range	53.21 to 63.74

Use cases

- Employers: judge the depth of the graduate talent pool.
- Universities: monitor enrolment trends.

Unemployment Rate

Trend card (national proxy)

UAE-wide unemployment as a share of the labour force (modelled ILO estimate, World Bank). This is a national figure, not a Dubai community-level one.

Source	World Bank
Period	2001–2025
Coverage	UAE-wide
Range	2.44 to 2.17

Use cases

- Lenders: read labour-market risk behind mortgage demand.
- Policy analysts: track employment health over time.

Median Age

Distribution card

The age of the median, or middle, resident according to official UAE statistics.

Source	UAE population by age (ArcGIS)
Period	n/a
Coverage	Dubai-wide

Use cases

- Retail and leisure: tailor offerings to the age profile.
- Healthcare and schools: anticipate demand by age band.

Poverty Rate

Trend card

The share of the UAE population living below 50% of median income (relative poverty). Absolute poverty at \$3.00/day is 0% for the UAE, so the relative measure is used.

Source	World Bank via HDX
Period	2013–2018
Coverage	Dubai-wide
Range	19.3 to 11.4

Use cases

- NGOs and government: track deprivation trends.
- Investors: context for social-housing demand.

Housing Units

Trend card

The number of Housing Units in the area according to the most recent year of official UAE statistics and surveys.

Source	UAE census series (ArcGIS)
Period	1980–2019
Coverage	Dubai-wide
Range	64,279 to 686,480

Use cases

- Developers: measure the size of the housing stock over time.
- Government: plan utilities and services for stock growth.

Housing Units Growth Rate

Trend card

The growth rate in the number of Housing Units in the area over the last five years according to the most recent years of official UAE statistics and surveys. Higher rates of Housing Unit Growth tend to occur in areas with high Population Growth.

Source	UAE census series (ArcGIS)
Period	1985–2019
Coverage	Dubai-wide
Range	1.69 to 8.09

Use cases

- Investors: compare supply growth with population growth to spot oversupply.

Rental Rate

Map layer

The area's typical monthly rent based on observed market listings and transactions in the UAE. Note that rental rates for smaller geographies (e.g., communities) may be estimated using available data.

Source	DLD Exchange (Ejari, 2026 YTD)
Period	2026-01-01 to 2026-08-28 (the API holds current-year data only)
Coverage	81 of 226 communities
Range	20,000 to 205,000

Use cases

- Tenants: benchmark a flat rent before signing or renewing.
- Landlords: price a listing against registered Ejari contracts.

Rent for Houses

Map layer

The typical monthly rent for a medium- to large-sized house in the area. Rent for houses is estimated by adjusting base rental market data upward (around 25%) to account for larger unit sizes.

Source	DLD Exchange (Ejari, 2026 YTD)
Period	2026-01-01 to 2026-08-28 (the API holds current-year data only)
Coverage	59 of 226 communities
Range	74,500 to 1,450,000

Use cases

- Families: compare villa rents across communities.
- Investors: villa yield inputs.

Cap Rate

Map layer

The unlevered annual return a real estate investor can expect if they were to buy a property at prevailing Home Values and rent it out at prevailing Rental Rates. Higher cap rates mean more cash flow returns to investors. Note that Cap Rate figures are estimates and could be subject to error, especially at the Community level.

Source	DLD Exchange (Ejari + DLD, 2026 YTD)
Period	2026-01-01 to 2026-08-28 (the API holds current-year data only)
Coverage	49 of 226 communities
Range	1.33 to 9.09

Use cases

- Buy-to-let investors: compare gross yields across communities.
- Portfolio managers: spot yield compression as prices outrun rents.

2-Bed Rental Price

Single-value card

Median annual rent for a 2-bedroom unit, Dubai-wide (Ejari records). NOTE: this figure cannot be broken down per community -- the underlying API ignores area filters on bedroom-level rent statistics.

Source	DLD Exchange (Ejari, 2026 YTD)
Period	2026-01-01 to 2026-08-28 (the API holds current-year data only)
Coverage	Dubai-wide
Range	144,323

Use cases

- Relocating families: a single reference rent for the most common family unit.

Home Value to Rent Ratio

Map layer

The typical Home Value in an area divided by the Annual Rent for Houses. This metric gives an indication of how expensive it is for a homebuyer to buy compared to rent. This metric also gives an indication of how much rental revenue an investor can expect relative to their purchase price (lower Home Value to Rent Ratios indicate more affordable markets to buy from an investor perspective).

Source	DLD Exchange (Ejari + DLD, 2026 YTD)
Period	2026-01-01 to 2026-08-28 (the API holds current-year data only)
Coverage	50 of 226 communities
Range	5.5 to 75.3

Use cases

- Buy-vs-rent decisions: how many years of rent equal the purchase price.
- Investors: a high ratio signals expensive entry relative to income from the asset.

Rent as % of Income

Map layer

The area's typical annual flat rent divided by a national income proxy (GDP per capita, World Bank), an indication of relative renter burden. NOTE: GDP per capita understates real household income, so treat this as a RELATIVE ranking between communities, not an absolute affordability figure.

Source	DLD Exchange (Ejari, 2026 YTD) / World Bank GDP proxy
Period	2026-01-01 to 2026-08-28 (the API holds current-year data only)
Coverage	81 of 226 communities
Range	10.8 to 111

Use cases

- Tenants and HR teams: judge rent burden by community.
- Policy: identify areas where housing costs are stretching households.

Long-Term Growth Score

Map layer

A 0-100 score built in-house from three metrics already in this dashboard: community population growth (60% weight), Dubai-wide home value growth momentum (25%), and UAE income growth momentum (15%). NOT a Zillow or third-party score. The market-momentum components are Dubai-wide, so only the population growth term differs between communities -- use this as a directional signal, not a precise forecast.

Source	In-house composite
Period	n/a
Coverage	188 of 226 communities
Range	30 to 90

Use cases

- Long-hold investors: shortlist communities where population, prices and incomes are all rising.
- Developers: pick locations with durable demand rather than one-off spikes.

Livability Score

Map layer

Composite 0-100 score: the mean percentile rank of up to six GeoStats layers - walkability, public transport coverage, healthcare accessibility, green space per capita, DSIB school rating and road-incident safety (inverted). Communities with fewer than 4 available components are not scored. Relative to other Dubai communities, not an absolute standard.

Source	Composite of GeoStats layers (OSM 2026, KHDA 2022/23, Dubai Police)
Period	2022-2026 (components: OSM Aug-2026 snapshot, KHDA 2022/23, Dubai Police incidents)
Coverage	137 of 226 communities
Range	16.9 to 84

Use cases

- Relocating residents: compare communities on amenities, transport, schools and safety at a glance.
- Developers: position projects against neighbourhood quality.

Housing Market Health Score

Map layer

Composite 0-100 score: the mean percentile rank of three market signals - 12-month price-per-m² momentum (DLD-derived, to Aug 2025), gross rental yield (Ejari, 2026 YTD) and sales liquidity (2026 YTD sales per 1,000 residents). All three are required, so 36 communities are scored. A relative ranking of market activity, not an absolute health measure.

Source	Composite of DLD-derived price, rent and sales data (2024-2026)
Period	2024-09 to 2026-08 (components differ: momentum to Aug 2025, yield and liquidity 2026 YTD)
Coverage	36 of 226 communities
Range	7.4 to 92.9

Use cases

- Investors: one score that combines price momentum, yield and liquidity.
- Brokers: focus effort on active markets.

Still locked 44 data points awaiting a source

These remain premium placeholders until a community-level source is available. Most need Dubai Statistics Centre census access or a listings-portal data feed.

Affordability Index	For Sale Inventory	Price Cut %
Affordable Housing Units	Foreclosure Rate	Remote Work %
Average Debt to Income	Home Price Forecast	Rental Vacancy Rate
Average Healthcare Cost	Homeownership Rate	Salary to afford a car
Average Living Cost	Income + Employment	Salary to afford a vacation
Average Transportation Cost	Inventory Surplus/Deficit	Sale Inventory Growth (MoM)
Average clothing cost	Inventory as % of Houses	Sale Inventory Growth (YoY)
Average grocery cost	Median Listing Price (YoY)	School Quality Score
Community Engagement Index	Monthly Home Ownership Cost	Senior Care Facilities
Days on Market	Mortgaged Home %	Shadow Inventory %
Days on Market Growth (YoY)	Mtg Payments as % of Income	Vacancy Rate
Domestic Migration	Neighborhood Quality Score	Vacant Home %
Economic Health Score	New Listing Count	Value / Income Ratio
Education + Age	New Listings Count	Youth Development Programs
Family Household %	New Listings Count (YoY)	

Values and coverage are read directly from the project's data registry at generation time. Percentile composites: Long-Term Growth, Livability, Housing Market Health. Proxies are labelled in their descriptions.
